

## Documents / Information Required for Patent

### Points for drafting a patent specification:

1. Title of the invention.
2. The compound to be prepared and its use in therapy.
3. Prior Art if any concerning the invention.
4. Handicaps of the prior art which this invention proposes to obviate step of the process and the reference in which these steps are to be carried out should be clearly stated and the reference in which these step are to be carried out should be clearly stated and what are the essential steps of the process and which are the optional or preferred steps.
5. In case of formulations the name of ingredients used in the formulation; the range of ingredients by wt/vol. or percentage. The range should be such below the lower limit and above the upper limit of the range. The formulation must not be effective.
6. Other parameters of the invention if any for effective and efficient carrying out the process of the invention.
7. A few detailed practical example of the process of the invention. The example may be for different range of the ingredients of other parameters of the process.
8. The precise advantage of the invention.
9. The structural Formula.

### The Necessary points for drafting a patent specification:

1. What is the title of the invention? Give Full Name, Address, Nationality of the applicants of the investors
2. Field of inventions.
3. Summary of invention.
4. Prior Art or existing technology in the field of invention, existing process or existing product.
5. Defects or drawbacks of the existing product.
6. Details of the invention.
7. If process patent with examples or if it is a product patent with the help of drawings.
8. Full working of the invention if it is a process patent. In case of a drug, then the treatment should be mentioned.
9. Advantages of the invention.
10. All the possible variations in the components/ ingredients of the invention.
